

Speechandvoice.com launches Accent Reduction for Adults

Colorado, December 3, 2008

Speech and Voice Enterprises announced to introduce accent reduction training for adults who are suffering negative effect in their social and professional life because of difficulty in communicating. Accent reduction is a systematic method for changing speech patterns, including pronunciation, voice production, intonation and rhythm.

Elizabeth Peterson, Director of Speech and Voice Enterprises says, “If you want help with accent reduction, the speech-language pathologist or a speech therapist is a natural choice for such assistance. The speech therapist has expertise in helping people with communication disorders, change their speech sounds, sentence structure and other aspects of communication and many of these same techniques are used to modify a person’s dialect. Speech and Voice Enterprises is one such provider that provides assistance in accent reduction”.

A person’s accent depends on many factors, which can be grouped as regional accent and foreign accent. A speech therapist evaluates your speech pattern professionally, and then on the basis of the evaluation he will determine what to do to modify your accent and improve your overall communication.

Using the accent reduction program offered by Speech and Voice Enterprises, an individual who wants to master a second language will be able to alter his speech to resemble the accent of a certain group of people and thus enhance the clarity of his communication with those people.
